Das menschliche Auge im Vergleich zum Bildsensor (CCD)

Das menschliche Auge

- 120 MPixel
- 2-3 µm Pixelmaß
- < 1 mW</p>
- perfekte Qualität
- Farbe: perfekt
- parallele Auslesung
- 10 Bilder/sec
- 500 Mio Jahre

- > 100 MPixel
- 1-100 µm Pixelmaß
- ca. 100 mW
- gute Qualität
- Farbe: gut
- serielle Auslesung
- 10 Million Bilder/sec
- 40 Jahre

Störgrößen auf dem Feld

Draußen auf dem Feld ...

Innovationsfeld "Imaging"

Image-based technologies:

- Color and grey scale imaging (1D, 2D)
- Shadow imaging
- Highspeed imaging
- 3D-imaging (laser, stereo, time-of-flight, ,,,)
- Multispectral imaging
- Hyperspectral imaging
- ➤ Thermal/UV imaging
- High dynamic range imaging
- Others (x-ray, THz, ultrasonic, NMR,...)

Imaging concepts:

- Sensor and data fusion
- Smart sensors
- Image processing ("classical")
- Machine learning
- Simulation technologies
- > Human machine interface
- Remote imaging
- "Low Cost Imaging"
